BOOK NUMBER 2

If this Book is transferred to other than the original purchaser, please notify the Publishers for the purpose of correcting the List of Users.

To keep pace with the development of the automobile business and kindred lines, revised editions of The Automobile Telegraphic Code will be issued when conditions demand. Suggestions for changes to make the Code more useful will be gratefully received.

EXPLANATION

The Automobile Telegraphic Code is arranged in three divisions:

- 1—A general vocabulary of words and phrases, pages 1 to 372;
- 2—Tables of numerals, bulk units, packages, quantities, stock numbers, grades, gauges, money, discounts and dimensions, and the calendar, pages 373 to 456;
- 3—Car parts, car models and accessories, pages 457 to 834.

TO CODE A MESSAGE :

In the general phrase division the words in blackface type are in alphabetical order, and are the governing words of the phrases following them; the phrases under each governing word are also alphabetically arranged. To code a phrase, look in the general phrase division under the governing word of the phrase you have in mind. For instance, to find "Can be obtained through our distributors," look under "Distributors." If the phrase desired cannot be found verbatim, use its equivalent. For example, the phrases "If they do not allow," "If you do not allow," "If we do not allow," are not given in this book, but the phrase "Unless an allowance is made (of) (for)" conveys the meaning of any one of them, and is represented by the code word "AEVEL."

To code an accessory, a car model or a car part, use the book as you would a catalog, referring to the index at the back. Likewise, to find a table refer to the index.

TO DECODE A MESSAGE :

The code words are arranged in one alphabetical order throughout the book. The first and last code words on each page appear in the heading next to the page number, and serve as guides to find the right word quickly. Use the book as you would a dictionary. Arrange the code words of the message in a vertical list and write the translation opposite each word.

NOTE THAT :

The code words differ from each other by at least two letters, which makes errors, arising from mutilation in transmission, practically impossible. Being of five letters each, two Automobile Telegraphic Code words may be combined to form one commercial cable word.

Whenever one or more blanks occur in a phrase, the sense is incomplete and the code word representing that phrase must be followed by other code words (or plain language) in the order in which the blanks occur, to complete the sense.

When a phrase contains alternatives, as "All in (his) (their) power," the context determines which should be used in translating.

Under "Car Models" a code word is given for each chassis. In cases where more than one type of body is built on the same model of chassis, and it is necessary to designate the type of body as well as the chassis, use one code word to describe the chassis and another to describe the body.

The names of parts common to all cars are listed under "Car Parts." The report (June 1916) of the Nomenclature Division of the Society of Automobile Engineers has been used as a guide for part names and arrangement.

When addressing manufacturers or dealers who handle but one brand it is of course unnecessary to specify the brand name of the merchandise referred to.

A careful study of the following examples will enable anyone to use the book intelligently. Study them by decoding and comparing your translations with the translations given.
